

TWONAV ANIMA

*Nicer, longer and
safer Outdoor trips!*

TwoNav presents a new GPS so that you can enjoy any outdoor activity with the latest technology. The TwoNav Anima is the ideal device for going walking or mountain biking with top-quality topographic maps. With its modern design, the TwoNav Anima reinvents sports navigation while adapting to any open-air experience: geocaching, cycle touring, road cycling and even reliable car navigation with voice guidance.

TwoNav Anima, everything you are looking for in a GPS

Long life for TwoNav Anima

A **replaceable 1.450 mAh lithium-ion battery** gives the TwoNav Anima a battery life of **12 h**. This and a revolutionary new 'Survival' function, allows you to prolong its use up to **22 h** in the event of an emergency. If you find this is not enough, you can use the TwoNav Anima with conventional batteries thanks a practical **AA battery accessory**, so that you never again need to worry about the battery life of your device

Maximum accuracy and safety

TwoNav has equipped the TwoNav Anima with today's best technology, including a high-quality chipset (**UBLOX Max-7Q**) to give you your current position accurately and immediately throughout your trip.

Tough high-visibility screen

The TwoNav Anima allows you to enjoy accurate navigation even in direct sunlight, with a clear view of your maps and **an excellent view of your route** by using a very fast, versatile and water-resistant flat touch-screen interface.

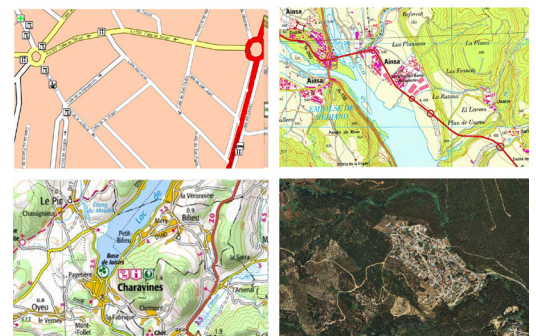

Practical external buttons

Another highlight is the practical benefit of **4 easy-to-access external buttons**. Even with gloves on, these buttons give you convenient control of the device's main functions without needing to use the touch screen.

Quality mapping

For the first time, the TwoNav Anima includes **preinstalled OpenStreetMap** maps for the whole country and the option of downloading maps for any other country in the world completely free. OpenStreetMap gives you practical routable maps with **automatic route calculation** to turn your outings into a great experience, whether in the city or in the mountains.

In addition, as always, TwoNav offers you the best **topographic maps** so that you can have the most detailed and useful information on your trips in the mountains. Choose your area and download the maps from the world's top cartographic institutes for free.

Visual information

Three lights in different colours (red, green and yellow) tell you the **status of your device** at all times. Check the state of your battery, whether the device is in standby mode and whether there are any programmed alarms at a glance:

- A flashing **red** light with audio signal when there is an alarm.
- A **yellow** light when the battery is charging, turning green when it is fully charged.
- A flashing **green** light when the device is blocked but not yet switched off - a useful visual reminder NOT to forget to switch off the GPS device.

New secure bike mounting system

In the palm of your hand or securely mounted on your bike, with the new TwoNav Anima you can discover the most beautiful places in your natural surroundings. For some years now, many mountain bike users have relied on TwoNav because of its tough bike bracket. Now along with a compact up to date design, the TwoNav Anima features a **new bike mounting bracket** for better integration and security on the bike, making it an even better option for both MTB and road bike enthusiasts.

Safe driving with voice navigation

Enjoy safer driving in your car with **audio instructions** via the speaker fitted in the new TwoNav Anima. There is also the option of using TomTom maps, turning the TwoNav Anima into a true and safe road GPS device providing turn-by-turn instructions, points of interest and radar location.

Technical features

TwoNav Anima design:

- Dimensions: 63 x 112 x 23mm
- Weight: 144 g
- Screen: transfective (3")
- Resolution: 240 x 400 pixels
- Certification: IPX7
- 4 external buttons: 2 front + 2 side

Technical specifications:

- GPS chip: UBLOX Max-7Q
- Battery: Li-ion 1.450mAh
- CPU: ARM 664 Mhz
- Internal flash memory: 4GB
- MicroSD card: 32GB
- Connection to PC: MicroUSB
- Instruments: 3D compass, Barometer, Accelerometer

The package includes:

- Topographic map: depends on pack chosen (1-5 Tiles, 1 Region, 1 Area or 1 Country)
